

Das alte Studmail-Konto in Thunderbird einbinden

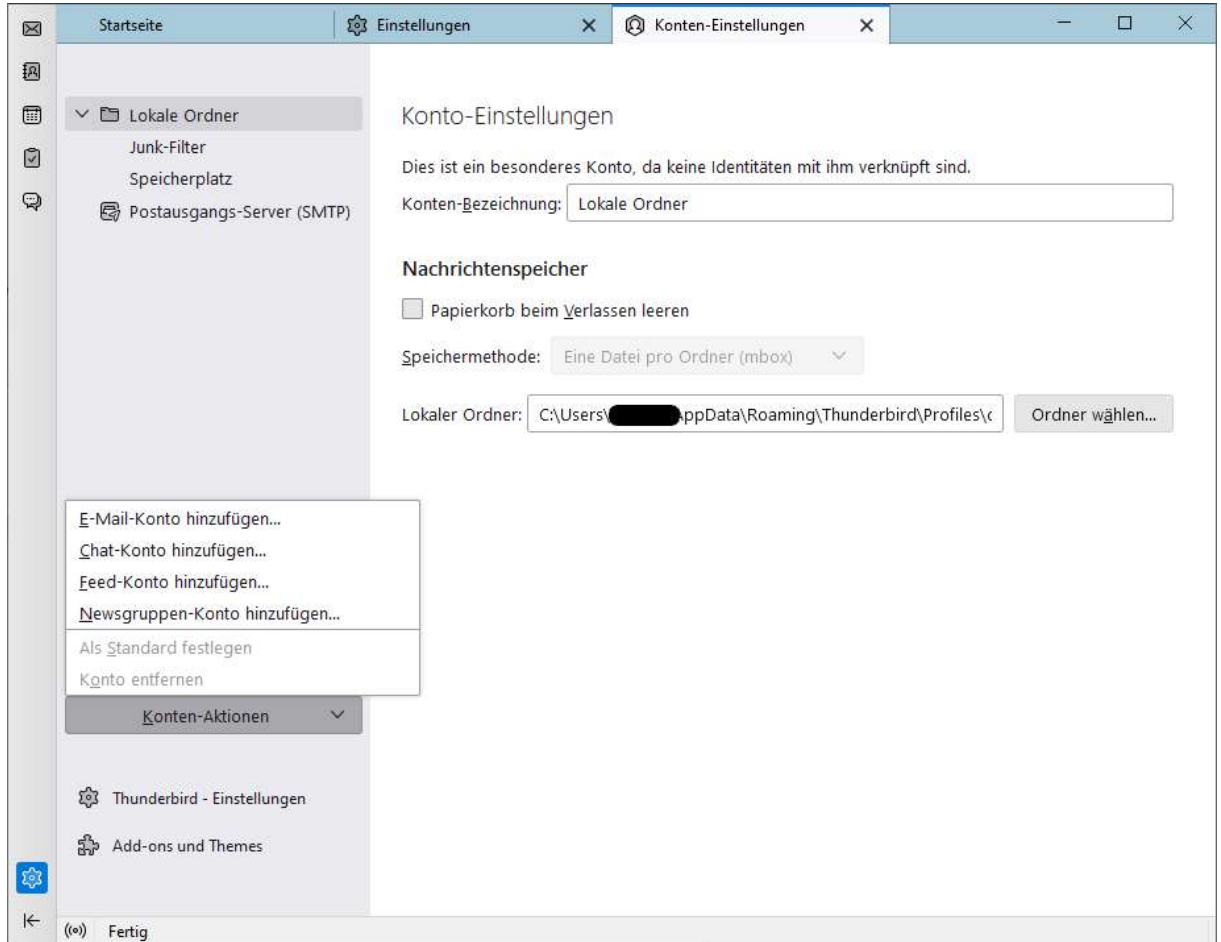

1. Thunderbird öffnen

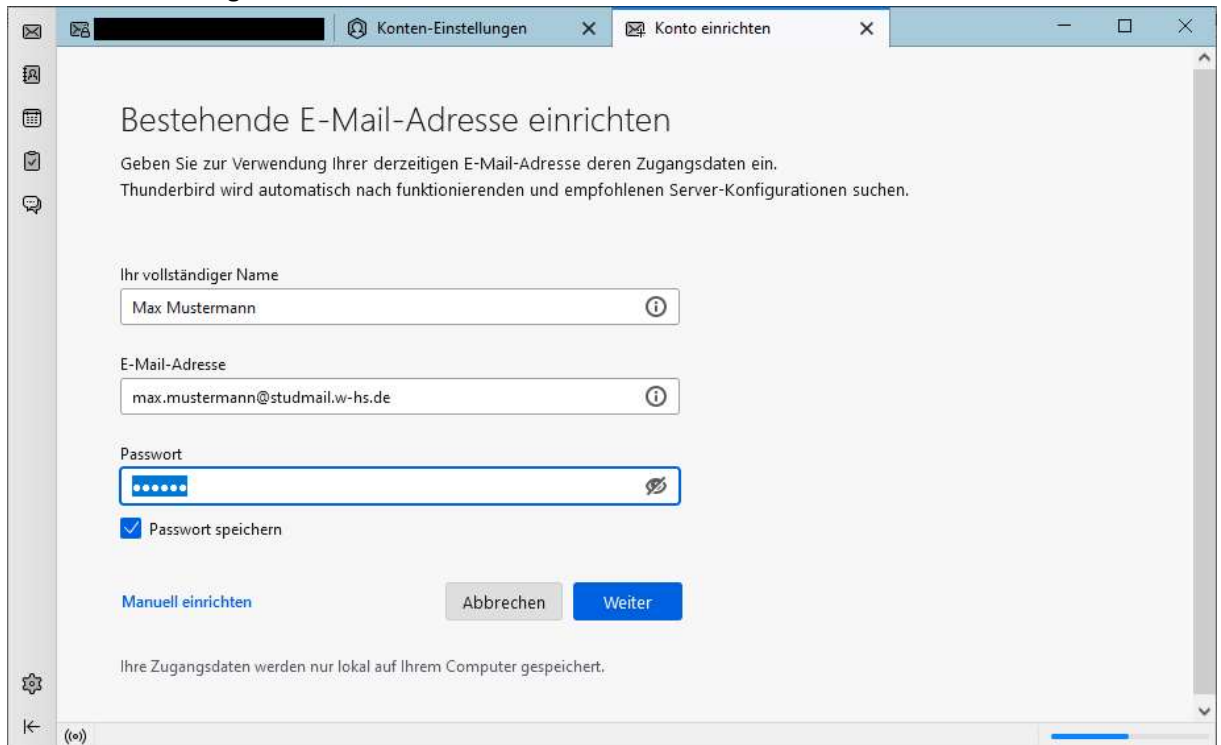

2. Konteneinstellung öffnen

3. E-Mail-Konto hinzufügen

4. Anmeldedaten eingeben

5. Manuell einrichten auswählen

The screenshot shows the 'Konto einrichten' (Set up account) window in a mail client. The window has a title bar with three tabs: 'Papierkorb - Lokale Ordner', 'Konten-Einstellungen', and 'Konto einrichten'. The 'Konto einrichten' tab is active. On the left side, there is a vertical toolbar with icons for mail, calendar, and other functions. The main content area is titled 'Manuelle Einrichtung' (Manual setup). It contains two sections: 'POSTEINGANGS-SERVER' (Incoming server) and 'POSTAUSGANGS-SERVER' (Outgoing server). Each section has several configuration options: 'Protokoll' (Protocol) is set to 'IMAP' for incoming and 'STARTTLS' for outgoing; 'Hostname' is 'studmail.w-hs.de' for both; 'Port' is '993' for incoming and '587' for outgoing; 'Verbindungssicherheit' (Connection security) is 'SSL/TLS' for incoming and 'STARTTLS' for outgoing; 'Authentifizierungsmethode' (Authentication method) is 'Passwort, normal' (Password, normal) for both; and 'Benutzername' (Username) is 'ab12345' for both. At the bottom right of the main content area, there is a link labeled 'Erweiterte Einstellungen' (Advanced settings).

Manuelle Einrichtung
